microtubule-associated protein tau - human c; Species: Homo sapiens (man)
C; Accession: S26664
R; Andreadis, A.; Brown, W.M.; Kosik, K.S.
Biochemistry 31, 10626-10633, 1992
A; Title: Structure and novel exons of the human tau gene.
A; Reference number: S26662; MUID: 93041757
A; Accession: S26664
A; Status: preliminary; nucleic acid sequence not shown; translation not shown RESULT S26664

A; Molecule type: DNA A; Residues: 1-18 <AND>

A;Cross-references: EMBL:X61375 A;Note: the nucleotide sequence was submitted to the EMBL Data Library, August 1991

JN0910
N4-(beta-N-acetylglucosaminyl)-L-asparaginase (EC 3.5.1.26) alpha chain - Flavobacter
N;Alternate names: glycosylasparaginase; N4-(N-acetyl-beta-glucosaminyl-)-L-asparagin
C;Species: Flavobacterium meningosepticum
C;Species: Plavobacterium meningosepticum
C;Species: I4-Jul-1994 #sequence_revision 14-Jul-1994 #text_change 17-Mar-1999
C;Accession: JN0910
R;Tarcentino, A.L.; Plummer Jr., T.H.
Biochem. Blophys. Res. Commun. 197, 179-186, 1993
A;Title: The first demonstration of a procaryotic glycosylasparaginase.
A;Reference number: JN0910; MUID:94071939
A;Accession: JN0910
A;Residues: J-02-CARA>
C;Comment: This heterodimeric enzyme is the counterpart to a lysosomal amidase/amidoh
gine-linked glycans.
C;Keywords: heterodimer; hydrolase
thrombopoietin receptor - mouse (fragment)
C; Species: Mus sp. (mouse)
C; Species: Mus sp. (mouse)
C; Date: 02-Aug-1996 #sequence_revision 02-Aug-1996 #text_change 05-Nov-1999
C; Accession: I78841
R; Alexander, W.S.; Dunn, A.R.
Oncogene 10, 795-803, 1995
Oncogene 10, 795-803, 1995
A; Title: Structure and transcription of the genomic locus encoding murine c-Mpl, a re A; Reference number: I78830, MUID:95166571
A; Reference number: I78841
A; Accession: I78841
A; Molecule type: mRNA
A; Residues: 1-18 < RES>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A41439
acid ribonuclease (EC 3.1...) - bovine (fragment)
acid ribonuclease (EC 3.1...) - bovine (fragment)
c.Species: Bos primiganius taurus (cattle)
c.Saccession: A41439
J. Biochem. 103, 267-273, 1988
A.Fitle: Purification of acid ribonucleases from bovine spleen.
A.Reference number: A41439; MUID:88227899
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

mannose-1-phosphate guanylyltransferase (EC 2.7.7.13) 37K beta chain - pig (fragment)
N:Alternate names: GDP-mannose pyrophosphorylase 37K beta chain
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 25-Feb-1994 #sequence_revision 12-Aug-1996 #text_change 13-Sep-1998
C;Accession: A47415
R;Szumlo, T.; Drake, R.R.; York, J.L.; Elbein, A.D.
J. Biol. Chem. 268, 17943-17950, 1993
A;Title: GDP-mannose pyrophosphorylase. Purification to homogeneity, properties, and utilization of the constant of the constan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Description: generates GDP-mannose and pyrophosphate from mannose-1-phosphate and GTP A; Note: also catalyzes synthesis of GDP-glucose from glucose-1-phosphate (EC 2.7.7.34 ac C; Superfamily: mannose-1-phosphate guanylyltransferase C; Keywords: nucleotidyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C;Species: Canis lupus familiaris (dog)

1- FUNCTION: CAUSES RAPID, RIGID PARALYSIS WHEN INJECTED INTO
LEPIDOPTERAN LARVAE. THE PHYSIOLOGICAL ROLE MAY BE TO REDUCE
HEMOLYWHY LOSS FOLLOWING INJURY AND PROMOTE WOUND HEALING.
1- SIMILARITY: BELONGS TO THE GBP / PSP1 / PARALYTIC PEPTIDE FAMILY.
PIR; C39855; C39855.
                              AT HIGH DOSES.
-1- SIMILARITY: BELONGS TO THE GBP / PSP1 / PARALYTIC PEPTIDE FAMILY.
                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

"Primary structure and biological activity of bradykinin potentiating peptides from Bothrops insularis snake venom.";
J. Protein Chem. 9:221-227(1990).
-!- FUNCTION: THIS PEPTIDE BOTH INHIBITS THE ACTIVITY OF THE ANGIOTENSIN-CONVERTING ENZYME AND ENHANCES THE ACTION OF BRADYKININ BY INHIBITING THE KINASES THAT INACTIVATE IT.

IT ACTS AS AN INDIRECT HYPOTENSIVE AGENT.

                                             antigento peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, eg. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucletc acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. (conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAY79994 to AAY80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                               ö

                               and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. ARY19994 to AAY80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes immunoglobulin E (IgE)-CH3 domain antiganic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-mallergy dermatitis. Nucleic acids that encode these compounds are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunoglobulin E; IgE; epsilon heavy chain; antigenic; antigen; immunoglobulc; immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-anti-anti-anaphylactic; anti-asthmatic; asthma; dermatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antigenic peptide from the CH3 domain of immunoglobulin E, fusions
specific for a target effector site on the epsilon-heavy chain of IgE

The present invention describes immunoglobulin E (IgE)-CH3 domain antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding pertides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epicope (functional in genetically diverse subjects), in addition to a B cell carget epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and
                                                                                                                                                                                                                                                                              ö
recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe (non-anaphylatcogenic) antibodies. AAY79994 to AAX80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immunoglobulin E; IgE; epsilon heavy chain; antigenic; antigen; immunoglobulinulatory; carrier protein; helper T cell epitope; antibody; allergy; allergy; disease; immunistation; anti-allergy; anti-asthmatic; asthma; anaphylaxis; dermatitis.

The Th epitopes and peptide immunogens containing them, are used to induce a T helper cell response, specifically against Plasmodium falciparum, cholesteryl ester transport protein (CETP) or HIV epitopes, but more generally against any pathogen, immunoreactive self-antigen or tumour antigen. The Th epitopes and peptide immunogens may be used for prevention and/or treatment of infections (HIV, foot and-mouth disease or malaria); for cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Promiscuous T-cell epitope; measles virus F protein; MVF; hepatitis B virus surface antigon; HBV; immunopenic; B-cell epitope; luteinising hormone releasing hormone; LHRH; contraceptive; anticancer; somatostatin; growth promotion; CD4 receptor; HIV-1; antiviral; FMDV; foot and mouth disease virus; immunoploblin E; IgE; anti-allergic; Plasmodium falciparum; circumsporozoite; antimalarial; CEPP; cholesteryl ester transport protein; anti-arteriosclerotic.
(non-anaphylactogenic) antibodies. AAY79994 to AAY80084 represent amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New artificial T helper cell epitope and derived immunogens with target antigenic site, for immunization against e.g. malaria, arteriosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunotherapy; for inhibition of the action of luteinising hormone releasing hormone (LHRH) for contraception, treatment of hormone-dependent cancer, prevention of boar taint in meat, and immunocastration); for promoting the growth of animals; or for treating allergies or arteriosclerosis. Incorporation of a promiscuous Th (functional in genetically diverse subjects) into an immunogen improves capacity to induce a strong T helper cell-mediated immune response, resulting in production of antibodies against a target

antigen. The day replace cariner proteins and pathogen-derived Theiper epitopes. Sequence AAY91121 represents a promiscuous Theiper epitope from the measles virus F (MVF) protein and sequences AAY91122-Y91146.

AAY91225 and AAY91143 represents a promiscuous Thepitope based on the MAY91256 and AAY91143 represents a promiscuous Thepitope based on the MAY91155 are synthetic epitopes derived from this HBV epitope. AAY91156 are synthetic epitopes derived from this HBV epitope. AAY91156-Y91196, AAY91127 and AAY9124-Y91244 are antigenic peptides. Comprising an LHRH sequence Joined to a promiscuous The epitope. AAY91197 is the LHRH target antigenic peptides comprising somatostatin, and AAY91201-Y91207 are antigenic peptides comprising somatostatin, and AAY91201-Y9120 PY90211 are WH The epitope/CDA CDR2 antigenic peptides which may be used to prevent HIV infection of T cells. AAY90212 is a modified version of a human IgE chantigenic peptides which may be used to the treatment of allergies.

AAY91220 is a peptide derived from foot and mouth disease virus (FMDV) contingenic peptides which may be used in the treatment of allergies.

AAY91220 is a peptide derived from foot and mouth disease virus (FMDV) contingen, and AAY91221-Y91222 comprise this peptide and a Th epitope and may be used in a malaria vaccine. AAY9128-Y91231 represent corprived peptides and AAY9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-Y9123-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  are HIV-1 neutralising B-cell epitopes, and AAY91248-Y91251 and AAY91258-Y91273 are antigenic peptides comprising MVH Th and HIV-1 B-cell epitope which may be used as a component in an anti-HIV-1 vaccine. AAY91198 and AAY91199 are respectively an immunostimulatory invasin protein epitope from Yersinia species, and hinge spacer peptide, both of which may optionally be used in the antigenic peptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             luteinising hormone-releasing hormone; spermatogenesis; ovulation; osstrus; sexual development; sex hormone; promiscuous T helper epitope; vaccine; contraceptive; hormone-dependent tumour; prostate cancer; breast cancer; endometriosis; boar taint; meat quality; immunocastration.
  antigen. Th can replace carrier proteins and pathogen-derived T helper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

                                                                                                                                                                                 The specification describes peptide immunogens comprising a synthetic helper T cell (Th) epitope and a target antigen, luteinising hormone-releasing hormone (LHRH). The peptide immunogens cause induction of a specific immune response to LHRH which is involved in regulation of spermatogenesis, ovulation, oestrus, sexual development and secretion of sex hormones. Provision of a promiscuous T helper epitope (which is functional in genetically diverse subjects) provides optimum immunogenicity to the B cell epitopes of the target antigen and thus high antibody titres against the target antigen. The peptide immunogens of the invention are used to vaccinate against mammalian LHRH, for use as (reversible) contraceptive; control of hormone-dependent tumours (cancer of prostate or breast, also endometriosis); to prevent boar taint (and improve meat guality) and for immunocastration. The present sequence appears in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   immunogenic; immunostimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-anaphylactic; anti-asthmatic; asthma; anaphylaxis; dermatitis.
                                                                                    hormone

                                                                                   ò
                                                    antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the spilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding petides or in DNA vaccines. (conjugates of (I) that include a promiscuous Thelper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural conformational features and maximize cross-reactivity to the natural conformational features and conformation anaphylactogenic) antibodies. AAY7994 to AAY80084 represent anino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAW24098-106 are peptide fragments containing at least 5 continuous amino acids of the partial canine immunoglobulin E (IgE) protein shown in AAW24097. The peptides are used for the preparation of anti-canine IgE antibody. The anti-canine IgE antibody can be used for the diagnosis of canine allergies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunoglobulin E; IgE; anti-canine IgE antibody; allergy; canine; dog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                        The present invention describes immunoglobulin E (IgE)-CH3 domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Canine immunoglobulin E peptide fragment and related DNA - useful for the preparation of anti-canine immunog.cobulin E antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound igE, and which doesn't bind to igE when the igE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound igE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

                                                                                                                                                                                                                                                                 The invention provides immunoglobulin E (IgE) antagonists comprising one or more of the FcepsilonRI receptor-binding determinant sites of human tage. The antagonists include IgE variants comprising an immunoglobulin template and binding determinant sequences (bds) CDbds, EFbds and the sequence shown in AAY42581. The CDbds (CD loop binding determinant sequence) are selected from the sequences shown in AAY42581 and the EFbds (EF loop binding determinant sequences shown in AAY42578 Y42580. The variants are useful in raising and screening anti-IgE antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment and prophylaxis of allergic
Immunoglobulin E variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (IGE) antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment of allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunoglobulin E variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (IGE) antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment of allergic

                                                             The invention provides immunoglobulin E (Igl;) antagonists comprising one
                                                                          or more of the PoepsilonRI receptor binding determinant sites of human igs. The antagonists include 1gs variants comprising an immunoglobulin template and binding determinant sequences :bds) CDBGA. BFbGAs and the sequence shown in AAY42581. The CDBGAS (CD loop binding determinant sequence) are selected from the sequences shown in AAY42577 and the FBPGA (FB loop binding determinant sequence) are selected from sequences shown in AAY4278-442580. The variants are useful in raising and screening anti-IgE antibodies, in the isolation and purification of PrepsilonRI receptor and in the treatment and prophylaxis of allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound ige, and which doesn't bind to ige when the ige is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound ige molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.

```
This invention describes a novel binding protein which specifically binds to native canine free or B-cell bound IgE, and which doesn't bind to IgE when the IgE is bound to mast cells. The peptide products of the invention have anti-allergic activity. The antibodies bind to defined epitopes on free or B-cell bound IgE molecules which have an important role in allergic reaction. The specific binding proteins are used to produce a pharmaceutical composition, preferably with a diluent, which can be used for prophylaxis or treatment of canine allergy.
                                                                                  Canine; allergy; antibody 15A.2; IgE; B cell; mast cell; anti-allergy;
epitope; prophylaxis; treatment; mimotope.
                                                                                                                                                                                                                                                                                                                                                                          Binding proteins used for treatment or prophylaxis of canine allergy
                                                    Antibody 15A.2 swine IgE binding epitope 1.
                                                                                                                                                                                                                                                                                                                   Mermer B, Francoeur G;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 95, Agreence 95, Agreence 99, Agreence 99, Agreence 99, Agreence 100, Sequence 90, Agreence 101, Sequence 97, Agreence 102, Sequence 97, Agreence 102, Sequence 56, Agreence 103, Sequence 11, Appsequence 11, Appseq

Patent No. 6025468
GENERAL INFORMATION:
TITLE OF INVENTION: NOVEL LHRH PEPTIDE
TITLE OF INVENTION: IMMUNOGENS
NUMBER OF SEQUENCES: 106
CORRESPONDENCE ADDRESS:
ADDRESSEE: Morgan & Finnegan, L.L.P.
STREET: 345 Park Avenue
CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   OPERATING SYSTEM: FC WILLIOUS SOFTWARE: WOR'D 97

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence Sequence Sequence Sequence Sequence

Sequence 18, Application US/07976358
Patent No. 5445932
GENERAL INFORMATION:
APPLICANT: FIELDS, Howard A.
APPLICANT: KHUDYAKOV, Yuri
APPLICANT: FAVOROV, Michael
TITLE OF INVENTION: METHOD FOR DETECTION OF A NEW MARKER
TITLE OF INVENTION: ASSOCIATED WITH HEPATITIS DELTA VIRUS INFECTION
NUMBER OF SEQUENCES: 24
CORRESPONDENCE ADDRESS:
                                                                         APPLICANT: FAVOROV, Michael
TITLE OF INVENTION: METHOD FOR DETECTION OF A NEW MARKER
TITLE OF INVENTION: ASSOCIATED WITH HEPATITIS DELTA VIRUS INFECTION
NUMBER OF SEQUENCE: 24
CORRESPONDENCE ADDRESS:
ADDRESSE: Foley & Lardner
STREET: 3000 K Street, N.W., Suite 500
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB 1; Length 25;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-07-976-358-21
Sequence 21, Application US/07976358
Patent No. 5445932
GENERAL INFORMATION:
APPLICANT: FIELDS, Howard A.
APPLICANT: FAVOROV, WITH
TITLE OF INVENTION: METHOD FOR DETECTION OF A NEW MARKER
TITLE OF INVENTION: ASSOCIATED WITH HEPATITIS DELTA VIRUS INFECTION
NUMBER OF SEQUENCES: 24
CORRESPONDENCE ADDRESS:
ADDRESSE: FOLGY & Lardner
STREET: 3000 K Street, N.W., Suite 500
COLTY: Washington, D.C.
                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                          ö
